Site Preparation

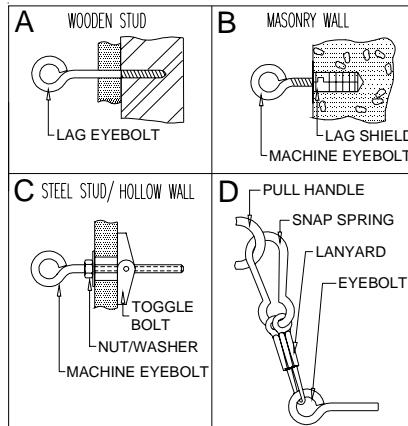

In determining the location for your Megatouch video game, consideration must be given to a suitable, grounded electrical outlet. Since the game is a computerized device, it should have a separate circuit, if at all possible. If a separate circuit is not available, care should be taken to provide a clean and constant voltage. As a basic guideline, never connect the unit to a circuit that also supplies power to freezers, coolers or other high power consuming and electrical noise generating equipment. Place the game in a location where nothing will interfere with proper ventilation. The game should not be exposed to any dripping or splashing liquids. Objects filled with liquid should not be placed on the unit.

The upright model should be located on a sturdy, level surface. The bottom of the cabinet has two leg levellers on the back to make any necessary adjustments. When the game is properly adjusted, it should remain stable. The game is designed to be secured to a wall. Locate the supplied hardware inside the coin box and follow the instructions below to secure the game.

1. Locate a wall stud to mount the game.
2. Measure 46" from the floor on the mounting stud and drill a hole to install the hardware. Installation into a wooden stud requires a 2" deep x 1/4" hole. For masonry walls drill a 1 1/4" deep x 1/2" hole. For steel stud or hollow walls drill an 11/16" hole.
3. For wooden stud installation, screw the lag eyebolt into the hole (see Figure A). For masonry wall, insert the lag shield into the hole and then insert and tighten the machine eyebolt (see Figure B). For steel stud or hollow walls, insert the toggle bolt into the hole and then insert

the machine eyebolt, nut and washer and tighten (see Figure C).

4. Route the lanyard through the eye bolt and attach it to the snap spring as shown in Figure D. Then, attach the snap spring to the handle on the back of the game.

Setting up your Megatouch Game

1. After removing the game from the carton, attach the power cord to the back of the game, near the on/off switch. Plug the game into a standard AC outlet.
2. Follow the instructions in the **Ticket Dispenser** or **Printer** section of the manual to load the tickets or paper. The tickets are located inside on the bottom of the cabinet and the paper is in the coin box.
3. Turn the power switch at the back of the game to ON and wait for it to go through its boot-up sequence. At the completion of the boot-up sequence, the game will display the Player Menu.
4. The machine has been preset at the factory and therefore should not need to be adjusted, however it is recommended that the screen be calibrated

(see **Screen Calibration**) and the coin or bill acceptor(s) be tested.

There are many custom settings available for the game. To customize the settings, follow the instructions beginning with the Main Menu section.

Game Description

The Megatouch Fun Zone comes housed in a 17" upright cabinet. This model has 4 key-locked compartments: the main bezel door, the coin/bill door, the rear door, and the ticket dispenser/coupon printer door.

The rear compartment of the game allows access to storage space for add-on accessories.

CPU Section

The CPU section is accessible by opening the front bezel. The bezel houses the LCD and the CPU section houses an electronics box which contains the motherboard, I/O board, power supply, hard drive, and the main harness. The SETUP and CALIBRATE buttons are located on the control board attached to the front of the bezel (see Figures 1 and 20). The security key is also on the control board. Pressing the SETUP button will bring you to the Main Menu Screen. See the next section for calibration instructions.

Coin Mech/Bill Acceptor Cash Box

The coin mech and/or bill acceptor are accessible by opening the front bezel of the cabinet (see Figure 19 for locations). The metal cash box door is key-locked for security purposes.

Ticket Dispenser/Coupon Printer

The ticket dispenser or coupon printer is accessible through the front door of the cabinet (see Figure 19 for locations). For detailed ticket and printer information, see that particular section in this manual.

If your game has a Smiley bill acceptor, there is a lanyard secured to the inside of the cash door. This can be attached to the clip on the left wall of the cabinet when you want to secure the door in the open position. See Figure 24 to locate the clip.

General Care and Maintenance

NOTE: THIS GAME MUST ONLY BE SERVICED BY QUALIFIED SERVICE PERSONNEL.

CAUTION: THERE ARE HIGH VOLTAGE PARTS IN THIS GAME. BE CAREFUL WHEN SERVICING THE INSIDE OF THE GAME. GAME SHOULD ALWAYS BE UNPLUGGED BEFORE SERVICING.

Screen Calibration

- Find the **CALIBRATE** button, located on the monitor control board attached to the bezel, and press it to enter the screen calibration mode.
- Touch the center of the first cross that appears on the screen. Once you release your finger, a second cross will appear.

NOTE: You must hold your finger on the cross for approximately 2 seconds for the calibration to be recognized.

- Touch the center of the second cross that appears on the screen.
- Once the second cross is touched and released, another cross will appear on the screen. To test the calibration of the screen, touch the cross with your finger and slowly drag your finger around the screen. The cross should follow your movement.
- Touch the **EXIT** button.

Monitor Adjustment Procedure

For adjusting the settings on our monitors, we suggest following the procedures described below. The vertical/horizontal controls and brightness/contrast controls are located on the monitor control board, attached

to the underside of the front bezel. See Figures 1 and 20.

Unlock and open the bezel so the control board is accessible while viewing the monitor. Pressing the button labeled **Menu** on the control board will show the on-screen display on the monitor. Adjust the monitor controls until the screens look as suggested in the following steps. When finished, close and lock the bezel.

1. Set the game to the Quik Match game screen.
2. Adjust the vertical and horizontal size and vertical and horizontal position to make sure that the game screen fills the monitor screen and that the game screen is centered.
3. Adjust the brightness and contrast controls until the red tiles are a rich red and the background is black. The numbers on the tiles should be bright white. (Adjusting the brightness and contrast can also correct for a lack of sharpness.)

General Circuit Board Handling Information

Before handling any boards, observe the following procedures:

- Prevent Electro-Static Discharge by:
 1. Storing the boards in the anti-static bags in which they are shipped.
 2. Removing any static charge from your body before handling the boards.
 3. Using a ground strap when handling the boards.
- When plugging in connectors to the board, make sure the connector is inserted straight onto the header and that the connector covers all header pins.
- Do not connect any peripheral device to the board, if the power is still connected to the peripheral or if power is already applied to the board.

CAUTION: Be extremely careful when replacing the lithium battery on the motherboard. There is a danger of explosion if the battery on the motherboard is incorrectly replaced. Only replace the battery with the same type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

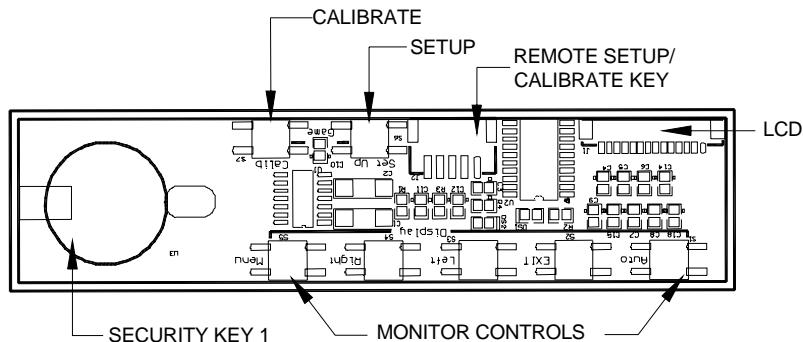

FIGURE 1 - MONITOR CONTROL BOARD

Cleaning the Cabinet

- The cabinet should be cleaned with a damp cloth and mild detergent. Always apply the cleaner to the cloth and not directly on the game. Liquids could enter the cabinet and damage electronics inside.

Cleaning the Touchscreen Monitor

- The touchscreen glass should be cleaned with a damp cloth and isopropyl alcohol or a non-ammonia cleanser. *Do not use any abrasive or vinegar-based cleansers, as they will damage the touchscreen glass.*

NOTE: DO NOT USE ANY ABRASIVE SOLVENTS, ACID OR VINEGAR-BASED CLEANSERS ON THE MONITOR OR SIDE DECALS. OVER TIME, SUCH CLEANSERS COULD HARM THE TOUCHSCREEN AND ERASE THE DECALS. BE CAREFUL NOT TO USE COMMERCIAL CLEANERS CONTAINING ANY OF THESE SUBSTANCES.

Cleaning the Fans and Vents

- The fans and vents should be cleaned of any dust on a regular basis to ensure proper ventilation of the game.
- To ensure proper operation of the game, it is important that all fans are operating correctly and that the airflow is unobstructed. Make sure nothing is placed inside the cabinet or next to the fan vents that would inhibit the flow of air. Also, if any fans are not operating, it is important that they be replaced.

Watch Dog Timer

This game has been equipped with a feature that allows it to automatically reboot if it encounters a problem. When the watch dog timer is enabled, it will reboot the machine within 2 minutes after a failure, allowing the game to automatically reset itself if a problem arises without needing a technician present. If you want to disable the watch dog timer, set DIP switch 3 on the I/O board to the open position and reboot the game.

Main Menu

The Main Menu can be accessed by pressing the **SETUP** button inside the game. Use the Main Menu to set up all game software options.

NOTE: *For help with the Options in any menu section, touch the green “?” buttons to bring up a help screen.*

Credits/Pricing Menu

Quick Price Setup

Quick Price Setup allows the operator to make general pricing changes without entering the Games Menu.

FIGURE 3 - QUICK PRICE SETUP SCREEN

3 Credits for a Dollar: Sets each game to the following price settings:

COIN INPUT	COIN VALUE	COINS	=	CREDITS	&	METER PULSES
1A	25¢	2		1		2
2B	25¢	3		2		3
3C	25¢	4		3		4

NOTE: If the game is set to 3 Credits for a Dollar, prices will be displayed in credits unless otherwise specified.

4 Credits for a Dollar: Sets each game to the following price settings:

COIN INPUT	COIN VALUE	COINS	=	CREDITS	&	METER PULSES
1A	25¢	1		1		1
2B	25¢	1		1		1
3C	25¢	1		1		1
6F	\$1	1		4		4

Games 1 Credit: Sets the cost of all games to 1 credit.

Games 2 Credits: Sets the cost of all games to 2 credits.

The operator can also use this screen to determine whether prices are displayed on-screen as credits or money. Default values are restored with the **Factory Settings** button. Touch the ? button for more information.

Coin-In

To Enter The “Coin-In” Screen, Touch “Coin-In” on the Credits Menu

Game cost can be controlled two ways: by changing the number of credits required to play a game or by changing the cost of a credit. The Coin-In Menu allows you to adjust the cost of a credit, as well as provide a way to give players “bonus” credits for depositing a higher amount of money.

When programming the Coin-In Menu, Channel 1 is set for the lowest value coin, Channel 2 for the next highest value, etc. If all six coin inputs are not used, the unused inputs must be set to “N/A”. Adjust the coin/credit/meter pulse settings by touching the left and right arrows on the field you want to change.

COIN INPUT	COIN VALUE	COINS	=	CREDITS	&	METER PULSES
1A	10p	3		1		3
2B	20p	3		2		6
3C	50p	1		2	player premium 25p/credit	5
4D	1£	1		5	player premium 20p/credit	10

In the above example (UK currency), each game costs one (1) credit and the cost for a single credit is 30p. This method is preferred if you want game cost to always be reflected as “1 credit.”

COIN INPUT	COIN VALUE	COINS	=	CREDITS	&	METER PULSES
1A	10p	1		1		1
2B	20p	1		2		2
3C	50p	1		6	1 bonus credit	5
4D	1£	1		15	5 bonus credits	10

In the above example (UK currency), the cost of a credit is set to 10p and each game costs 3 credits (for a total of 30p). This method allows game cost to be increased by the smallest unit of currency used (e.g. increasing the cost of Solitaire to four (4) credits would increase the game cost by 10p).

In both examples, note that meter pulses are independent of credits and only track the unit of currency (10p in the examples). Players are given an incentive to deposit more money they earn “bonus” credits for depositing 50p or £1. Coins may be deposited in any combination of values and the game will automatically register the highest number of credits for the total amount of coins deposited. Once a game is played, any remaining fractional credits are erased.

Generally, most countries have a factory default setting. This setting can be adjusted (as described above), but will return if the game memory is cleared. Some programs, depending on the key used, have a currency default display located to the left of the coin inputs. It shows the currency value for each of the coin inputs. This display is used as a guide and is not used in any calculations. Touch the currency default display to hide/show the display.

Games Menu

The game list and prices, are programmed using these screens. The Game Setup Screen shows the available game positions and the price for each game, with the list at the bottom showing all available games.

FORCE games only: A USB Pen Kit (kit number KAV-100-008-02) is available. To order, contact your local distributor.

Fun Zone Setup

The Fun Zone Setup Screens allow you to program what is printed on coupons and set up the rewards for particular game scores. On the Fun Zone Setup Screen, select how many tickets are awarded for kid's games by using the arrows next to **Kids Game Payout**. Certain kids games will always award this number of tickets per game.

Coupon Setup (Printer Games Only)

Each coupon will print the time and date of the order, the machine ID (serial number), and a unique transaction ID (the time backwards followed by the value of the ticket, the last four digits of the serial number and then the sum of the digits for time, ticket value and date).

The Coupon Setup Screen allows you to set up the text which will print on the coupons. Skill Score: All Fun Zone games convert raw game scores to a skill score to remove the element of chance. The Skill Score is determined by comparing a player's score with all other scores achieved by players using the same play fields. The resulting score is a percentage of 100,000, determined by comparison to other players on the same levels. The amount of tickets won is based on Skill Score and Credits played.

Tickets Won: Changes the number of tickets won per Skill Score. Move the Up and Down arrows in the Payout: 1 Credit row. Once the ticket payout is selected for 1 Credit (\$0.25), the payouts for 2 (\$0.50), 3 (\$0.75), and 4 (\$1.00) credits will adjust accordingly down the vertical column. The number of Tickets Won for a specific Skill Score cannot exceed the number for the higher Skill Score to its right.

The **Average Tickets Per Credit** number on the bottom left corner of the screen changes in relation to increasing and decreasing of the number of Tickets Won. In conjunction, the Average Tickets Per Credit, Tickets Won and percentage payout per credit can be used to calculate and control the amount of return value players receive from the total credits played.

Ticket Value: Adjusts in increments of 1/10 of a cent. As the ticket value is raised or lowered, the percentages next to Payout: X Credit respond appropriately. The percentages represent the return rate an average player will receive for a specific credit or money input.

NOTE: Changing the value of credits in the Credits/Pricing Screens will also effect payout percentages. Higher prices per credit equal a lower percentage return of payout for the player; lower prices earn the player a higher percentage payout.

Max Tickets: Sets a cap on the number of tickets a player may win. Tickets increase by increments of 10. The minimum cannot be set below the highest payout of a 4 credit game.

Progressive Bonus: Turn this feature **ON** or **OFF** by touching the appropriate button. If a skill score of at least 90,000 is achieved, the player can win the progressive bonus. Each coin deposited increases the jackpot by the number set in the **Jackpot Growth** field. Max tickets is used to restrict the progressive jackpot from growing past its value.

NOTE: *This feature is only activated at the highest pay line of play.*

Set Defaults: Restores all ticket payout settings to the factory defaults.

Fixed Payout %: Select **ON** to have the payout percentage remain the same for each pay line. Select **OFF** to have the payouts increase with each additional credit played.

View Defaults: Touch this button to view the factory default settings. This can be helpful if you want to view the default settings while you are making changes to the Ticket Setup Screen. Touch **Hide Defaults** to return to the Ticket Setup screen.

Undo Changes: Cancels all changes the operator made during the session.

Transaction Log

The Transaction Log Screen will display the date, time, transaction, value in tickets and ticket balance for the last 500 transactions that occurred on the machine.

To Enter This Screen, Touch “Transaction Log” on the Fun Zone Setup Menu

FIGURE 15 - FUN ZONE SETUP MENU:

Tickets (ticket games) - indicates the number of tickets printed.

Ticket Coupon (printer games only) - indicates winnings have been redeemed and coupon printed. The number of tickets needed for the coupon are subtracted from the total tickets. The new balance is reflected here.

NOTE: Printer Games ONLY - Players must click on the View Prizes button located on the Player Menu Screen to select a prize and print the coupon.

Tickets Cleared (printer games only) - indicates the customer never printed the coupon, so when the game entered idle mode (after 15 minutes of attract screens), it was erased from the game.

Specific Prizes (printer games only) - indicates the name of the prize the player has won.

NOTE: If you clear lifetime books the transaction log will also be cleared.

DIP SWITCH SETTINGS

The following table provides information on the functionality of the hard DIP switches in Megatouch games. Make sure to read the information in the **Notes** column to determine what is affected when performing these functions. After performing any DIP switch function, make sure to follow the instructions on the screen. In most cases, you will be instructed to reset the DIP switch in order to reboot the game. If you fail to reset the DIP switch before rebooting, it could result in corruption of the hard drive.

NOTE: In FORCE 2005 and Jade software, the DIP switch functionality is built into the software. To access the DIP switches through the software:

Turn off the game. Set DIP switch 1 to the closed position. Turn power on. When the message “**Please reset DIP 1 to proceed**” appears, reset DIP 1 to the open position. The Merit diagnostics page will appear. Touch ? for information on DIP switch functionality. Touch the specific DIP switch to activate it. Touch X to exit.

In this case, the hard drive will have to be replaced.

Printer (Printer Games Only)

When the printer is low on paper, a warning message will appear when you enter setup. After replacing the roll, the message will remain in setup until another ticket is won.

Changing the Paper

NOTE: Do not try to operate the printer if it runs out of paper. The printer wont print, but it may continue to accept data from the game; therefore, this data may be lost.

1. Turn off and unplug the game.
2. Unlock and open the dispenser door.
3. Open the top cover of the printer by pulling under the alignment tabs on both sides (See Figure 16). You may need to unscrew the thumbscrews near the tabs and pull the bracket away from the top cover in order to open the cover.
4. Pull the spindle from the tabs and remove the used roll.

5. Tear off the end of the new roll so that the edge is loose and place the new roll into the spindle bracket with a few inches of loose paper at the bottom of the roll. See Figure 17.

CAUTION: The tear blade has sharp corners. Use caution when loading paper.

NOTE: Be sure the paper unrolls from the bottom. Otherwise, the printer will not print.

6. Pull up on the bottom of the paper roll and align the paper properly before closing the cover. See Figure 16.
7. Feed the paper in between the paper guide brackets. See Figure 16.
8. Advance the paper by pressing the paper feed button and tear off the excess paper. See Figure 16.

NOTE: In the event of a paper jam, remove the roll, tear a new clean edge, and replace it in the paper bucket, as described above.

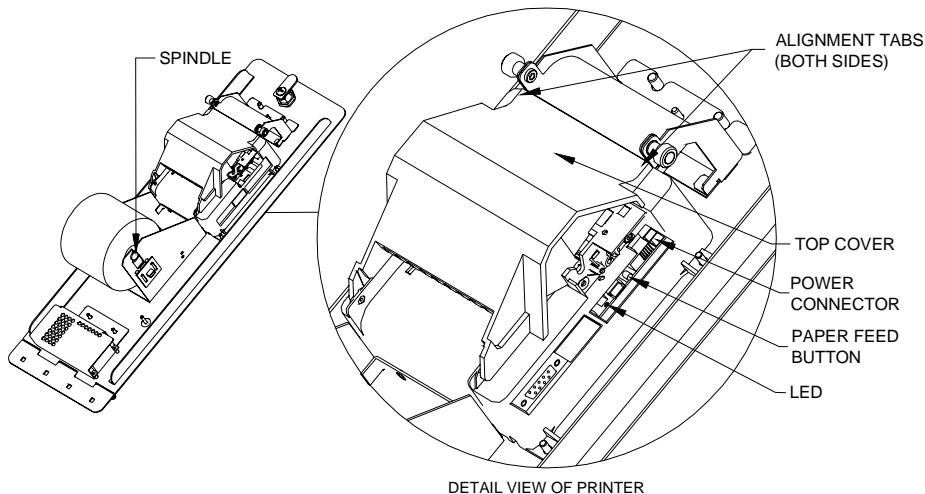

FIGURE 16 - PRINTER DOOR

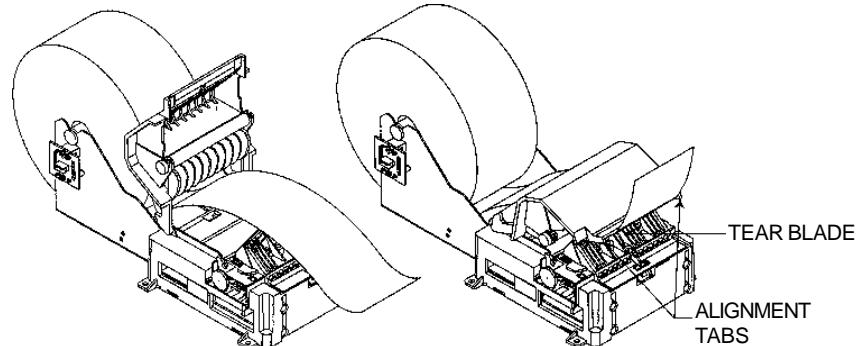

FIGURE 17 - PRINTER - LOADING PAPER

Testing the Printer

To print a test ticket to check the print quality, unplug the power connector shown in Figure 16. Then, plug the connector back in while pressing and holding the Paper Feed Button for approximately 6 seconds. A test ticket will be printed approximately 5 seconds after. Press the paper feed button once more and the ticket will feed. Pressing the button again will result in blank tickets.
